According to my interpretation, 3 clusters are a good measure. Cluster AB, (CE), and F. Cluster AB is for people who like to gamble sometimes, or just tried it. They do this just to have a bit of fun and don't go too deep with spending. F is for the average customer, they like gambling but aren't too addicted. Avg bet and avg visit. (CE) is for big spenders, frequent customers. Could be very rich, could be addicted, or both. We could give AB a newcomer promo for them to be more engaged and hopefully spend more.
